OrientWare and ObjectWeb Cooperation

Due to the highly fragmented market the potential of Europe and China depend on its capability to collaborate efficiently. R&D is required in new models for co-operation in software development taking advantage of the European and Chinese strong position in education level, middleware technology and open source development.

The overall technical goal of the cooperation between [ObjectWeb and Orientware](#) is to develop a common open source platform for next generation middleware focusing on the development and enhancement of a comprehensive set of open source adaptable middleware components.

The overall [roadmap](#) includes the set up of joint projects on topics of common interest such as [component-based architecture](#), [SOA/web services](#), [workflow](#), [transactions](#), [J2EE](#), [autonomous management](#), [CCM](#) and Grid computing.

Common contributions will be released as open source under [LGPL licence](#).
